

FACILITIES ENGINEER

Baytex Energy Corp. is an aggressive, growth oriented Senior Oil and Gas Company, which has found continued success from internally generated exploration and development projects and accretive acquisitions. Baytex is looking for a full time **FACILITIES ENGINEER** with a minimum of 7 years of experience.

Reporting to the Facilities Manager, the Facilities Engineer will work closely with Production Engineers and Field Operators to support facility construction and optimization projects in all operating areas.

Responsibilities:

- Scope, plan, design, engineer and execute facility related projects (well tie-ins, compressor installations / modifications, operational process troubleshooting, debottlenecking, etc.)
- Trouble-shooting and consulting on facility related issues
- Scoping studies for facility process modifications, enhancements to improve facility performance, reduce costs and enhance production volumes
- Prepare various cost estimates to understand options associated with projects

Qualifications:

- Preferably more than 7 years related experience in oil and gas projects
- Bachelor's degree in an engineering discipline, or engineering technologist diploma
- Previous training/experience working within an EPC environment would be an asset
- Previous training/experience working within a gas compression design, service, or fabrication environment would be an asset
- Proven project management skills as relates to facilities project development
- Strong team player within a multidisciplinary environment
- Effective verbal and written communications skills
- Working knowledge of regulatory requirements associated with oil and gas facility related projects in Western Canada
- Must be willing and able to travel within Western Canada on a regular basis to facilitate managing new projects as well as troubleshooting within existing operations

Closing Date: March 19, 2012

Job Code: CF04-003
